

AUTOMATION & QUALITY CONTROL SERVICES

Our mid-office solution, CORREX®, is a hosted travel transaction platform that helps you streamline your operations, increase productivity, and reduce errors by automating manual tasks associated with file finishing, quality control, and electronic ticketing.

CORREX Self-Service:

Web-based service that allows clients to view their CORREX activity and more effectively manage their accounts. Clients can access key metrics and reports, make service requests, change business rules, get agency and account information, and schedule tasks.

WHY CORREX?

The CORREX platform serves as a hub for travel processing operations. CORREX streamlines and standardizes mid-office processes and Passenger Name Record (PNR) content, directing PNR traffic, connecting databases, collecting additional account data, and correcting errors or omissions. By automating manual processes, CORREX helps increase agent productivity, reduce front and back office errors, and consolidate pre-travel and transaction reporting across multiple Global Distribution Systems (GDSs) and alternative distribution channels. With CORREX you can:

- Ensure optimal PNR quality and viability
- Drive a higher percentage of touchless transactions
- Improve traveler reservations – fares, seats, class of service – and increase customer satisfaction
- Proactively manage traveler reservations with pre-trip reporting capabilities
- Identify and track unused e-ticket coupons, increasing your value to your customers
- Eliminate technology infrastructure concerns
- Lower operating costs

FEATURES

CORREX Quality Control

Document key data, policy, and traveler preference information in the PNR to reduce errors and costs. CORREX flexibility allows you to customize business rules by account to ensure PNR quality, viability, and standardization.

CORREX Trip Improvement

Automate trip improvement activities, including low fare searches, seat assignments and improvements, and waitlist clearance.

CORREX Auto-Ticketing

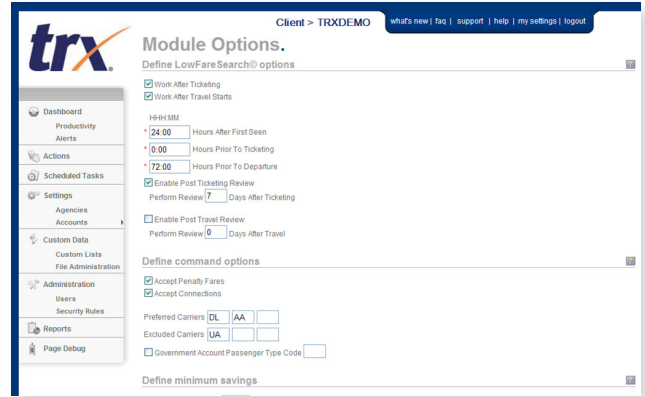

Reduce agent handle time, streamline operations, and save money by automating the ticket reservation process. Automatically send travelers itineraries, travel alerts, schedule changes, and other reservation information.

CORREX Pre-Trip Reporting

Customize report elements to track fare savings, multiple passengers on the same flight, arrivals, and departures. Auto-refreshes PNR data without agent intervention for accurate, up-to-date reports.

CORREX E-Ticket Tracking

Automate the identification and tracking of unused e-ticket coupons. CORREX automatically reviews and reports e-tickets with unused air segments so agencies, corporations, and travelers can track and utilize the value of unused e-ticket coupons.

CORREX Modules:

Clients have access to standardized module settings that can be adjusted to meet your needs. Select the intervals for seat or low fare searches to be performed and identify preferred carriers in an easy to use interface.
