

TRAVELTRAX® automates the aggregation and consolidation of data from your distributed resources into a unified business intelligence reporting solution.

Meaningful information is now available at your fingertips, within an intuitive web reporting environment – allowing you to view, analyze, and measure the Key Performance Indicators (KPIs) that are most important to your business.

#### Home Page Dashboard:

TRAVELTRAX provides summarized travel data in a visual, easy-to-read dashboard, customized to track and report on the metrics and measurements you want to monitor.

Additional reports provide the same clarity allowing you to better manage your airline contracts or monitor your corporate CO2 travel footprint.

## WHY TRAVELTRAX?

Traditionally, business intelligence has been the province of the IT department to decode and propagate. With TRX's TRAVELTRAX solution, this is no longer. TRAVELTRAX is built on technology that is so sophisticated it's actually...simple. This means data is transformed into high-value information, immediately available to the individuals who can act on it, presented in a way that is richly visual, engaging, and clear. And all of it is available in one place!

So, whether you are trying to monitor new travel policies, manage budgetary goals, analyze spend behaviors, negotiate new air contracts, or locate your global travelers, TRAVELTRAX will present the data in a clear, straightforward way which will drive results – inevitably leading to the bottom line and return on investment.

**Traveler Summary:**

*Detailed information on travelers provides insight necessary to understand spending habits that are out of compliance, identify rising cost categories, or track trends that could lead to cost-saving policy changes.*

Now you can truly unify data from all of your data sources to gain a multi-dimensional picture of your company. You can even combine and match data from different sources to unlock hidden relationships in the data that were previously impossible to ascertain due to the lack of centralization. To facilitate this, TRAVELTRAX supports hundreds of global data interfaces and systems. TRAVELTRAX is powered by our robust data integration and capabilities which allow TRX to deliver high quality services across these and a growing set of industry needs:

- > Travel – GDS, Travel Agency/Back Office, Suppliers (Air, Car, Hotel)
- > Financial – Credit Card, Expense, Budget
- > Human Resources – Corporate Hierarchy Data
- > Health Care – Audit and Insurance Records
- > Multimedia – Video Conferencing Logs
- > Procurement – Purchasing Records

Supplementary data enhancement services are also available. For example, our Merchant Name Normalization process will cleanse and standardize your data to improve the accuracy and quality of your information. Other services include CO2 processing and matching of your travel agency and credit card records.

**TRACK. CONTROL. SAVE.**

Simple access to high-quality, objective, consolidated data – and clear recommendations on how to control and reduce travel spending is here. With TRAVELTRAX, you get clean, complete data you can trust, allowing you to take action with confidence to reduce costs.
